

CISSP Certified Information Systems Security Professional

Course Overview

Aimed at security professionals, this course surveys the entire information security landscape and the technologies involved. The course addresses the ten knowledge domains that comprise the common body of knowledge (CBK) for information systems security professionals and will help delegates prepare for CISSP certification.

The course offers a theory based approach to the security process, with opportunities to discuss the immediate application of concepts and techniques described in the CBK to the real world. It can be considered as providing a good introduction to security management, architecture and engineering.

Objectives

The goal of this 5-day course is to provide information security professionals with a fully-immersed, minimum- distraction CISSP® training and exam preparation experience. The course will broaden and deepen your understanding of all ten CBK® domains to prepare you for the challenging CISSP examination.

Course Benefits

The 5-day training program is designed to fully prepare you for the CISSP® exam. Course attendees learn in detail about the ten domains covered under the (ISC)2 Common Body of Knowledge (CBK), including an understanding of the related concepts, skill sets and technologies used to plan for, design, and manage each domain.

Target Audience

This course is designed for experienced security professionals who want to expand their knowledge and gain an internationally recognized accreditation. Whilst anyone can attend the course, please note that the CISSP®

accreditation is only available to those who meet the (ISC) 2 entry requirements.

Pre-Requisites

The course assumes you have varied IT experience gained over a number of years. Please note that in order to be eligible to sit for the CISSP exam you must have either five years of experience in Information or Computer Security or else a tertiary degree and four years of experience in Information or Computer Security.

Examinations:

This course will assist delegates preparing for the following exam: CISSP Certified Information Systems Security Professional. The CISSP exam is set, administered and marked by (ISC) 2 Inc., the International Information Systems Security Certifications Consortium. If you wish to do the exam you must register for the exam direct with (ISC) 2 at www.isc2.org.

Course outline

Module 1: Access Control

Module 2: Security Architecture and Design

Module 3: Telecommunications and Network Security

Module 4: Cryptography

Module 5: Information Security Governance and Risk Management

Module 6: Software Development Security

Module 7: Operations Security

Module 8: Physical Security

Module 9: Business Continuity and Disaster Recovery Planning

Module 10: Legal, Regulations, Compliance and Investigation.

Duration

5days
